

Construction reaches highest point

The Griffith Base Hospital redevelopment has reached a significant milestone with the construction of the new three-storey clinical services building reaching its highest point.

Designed in collaboration with staff and clinicians, the purpose-built clinical services building will consolidate all major health services under one roof, supporting contemporary models of care and improving patient experiences. The new hospital is on track for completion in 2025.

Farewell to the tower crane

Having towered over Griffith for 15 months, our tower crane named Hope was a highlight of this year's Citrus Sculptures, and a unique new addition which delighted visitors.

With structural works for the new building completed, the tower crane is no longer required. It will be removed from the site in early November. This is an important milestone as the focus of construction shifts to internal fit-out and exterior works.

All services under one roof

When it opens, all inpatient and ambulatory services currently provided to the community from various buildings across the campus, will become operational under the one roof of the new Hospital building. There will be significant improvements and benefits for staff, patients, carers and visitors including:

- Separate Emergency Department and Reception entrances;
- A mix of single & double inpatient rooms with ensuites. All rooms have a window;
- Three palliative care rooms, a family lounge and outdoor terrace in the inpatient unit;
- Capacity to cater for growing demand for services such as Aged Care and outpatient clinics.
- Outdoor and landscaped spaces available for staff and patient/visitor use including a community lounge and courtyard, designed in consultation with the Aboriginal community;
- A new Café and the continuation of the Hospital Auxiliary's Kiosk;
- Expanded onsite car parking including accessible parking and dedicated drop off zones;

The new Griffith Base Hospital will provide:

	An emergency department		Medical imaging services
	Intensive care unit		An outpatient care unit for the community to access outpatient health services
	Surgical and operating theatres		Increased capacity for chemotherapy and improved renal dialysis access
	A day-stay surgical unit		Paediatric and maternity
	Dedicated surgical, aged care and rehabilitation beds		Direct clinical linkage with St Vincent's Private Community Hospital
