

Fact Sheet

Griffith Base Hospital Redevelopment

Mid 2025

Pedestrian safety near construction

Many of the old hospital buildings on the Griffith Base Hospital site will be demolished after the new hospital is complete and operational. A new hospital main entry, drop-off zone and carpark will be constructed to complete the redevelopment project.

There will be some changes to the carpark layout, traffic flow, exit point and pedestrian access to allow for these works to occur. The health and safety of staff and the local community is our main priority and we are committed to minimising the impact of our works.

Keep safe around construction by following the below.

Follow the signage: A traffic control plan will be in place for all works occurring on the campus. Follow all signage to ensure you're taking the safest and most accessible pedestrian paths.

Follow the footpath: Follow the footpath and don't walk on the vehicle entry or exit driveways. There will be a pedestrian pathway made available for safe access.

Stay outside of safety barriers: Temporary barriers such as fences and hoarding will be installed around all demolition and construction sites to maintain a safe distance between the community and construction. Always keep clear of these zones and follow all traffic management signs.

Be aware of uneven surfaces: The re-routing of pedestrian traffic can sometimes include unpaved or uneven surfaces. Detours will always take the safest option available, however it is suggested to be aware of your surroundings. Visually impaired people should take extra precautions through this area to detect changes in the surface they are about to encounter.

Minimising construction impacts: The health and safety of staff and the local community is our main priority and we are committed to minimising the impact of our works. We endeavour to keep noise, dust and vibration to a minimum.
